

PerfluorAd® Technology:

Removing PFAS from AFFF Firefighting Vehicles

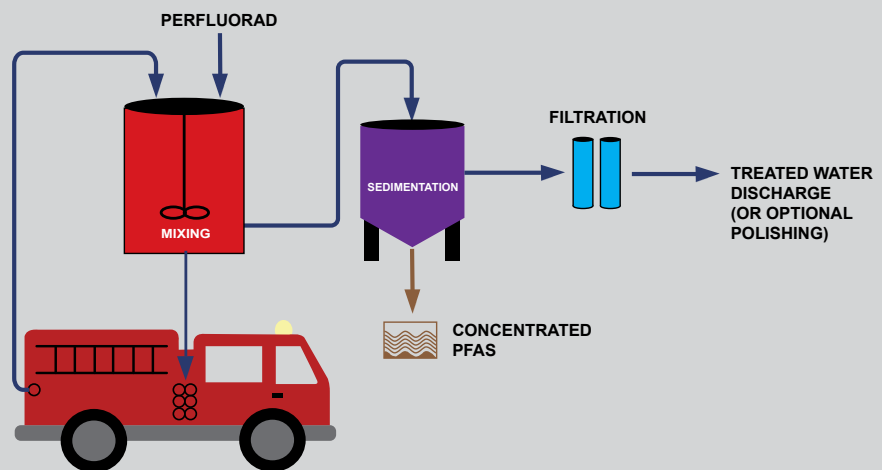

Using the patented PerfluorAd® technology, TRS can reduce PFAS concentrations by more than 99% in aqueous film forming foam (AFFF) firefighting vehicles. PerfluorAd is a sustainable, biodegradable compound that forms easily filtered PFAS-containing particles when mixed with AFFF. We circulate a dilute solution through every part of the fire suppression system until we reach acceptable effluent concentration levels.

Connecticut DEEP Results

AFFF Cleanout PFAS Reductions

- Cleanouts in three to five days
- Fixed fire suppression systems, too
- Stand-alone or polish with carbon
- Tremendous cost savings
- Rinsate treatment reduces waste
